

University Of Mobile

Mobile, Alabama

PROJECT SUMMARY

The twin bridges at the University of Mobile were chosen by the project's Landscape Architect and Engineer. These two aluminum structures stand at the symmetrical campus entrance providing bike and pedestrian access. Gator was able to provide plans, the engineered drawing package, fabricate and deliver the new bridges within a 90 day time frame. The bridges feature our arched contour truss design and composite decking for years of maintenance free use.

Installation
2013

Project for
University Campus

Features
(2) 8'x40' Aluminum Bridges
Contour Truss
Powder Coated Black
Composite Decking
